

Built specifically for the needs of student organisations

The BAM Website Platform

Designed solely for student organisations, structured and maintained to constantly advance and support their needs; the BAM Website Platform delivers vast quantities of facilities and services. For over 5 years, the BAM Website Platform has been fully developed in-house and is now utilised by over 75 student organisations. Our dedicated professional web department creates each organisation a unique website built to their identity, providing instant recognition of their brand.

The platform, at heart, is a communication tool between the student organisation and its members. However, through BAM the system provides numerous additional features to aid student organisations and their staff. From our complete ticket and membership management; the BAM Website Platform delivers key services, which are exclusively designed for student organisations.

BAM invests heavily in its support and service infrastructure. Our complete website system is hosted by world class providers UKFast, with multiple servers in a load balanced environment, providing reliability and performance. Continuous support by phone and e-mail helps our member organisations with any assistance that is required.

With continuous development and advancement, the BAM Website Platform is everything a student organisation needs in a website solution. With packages available completely free of charge, why not call us for a demonstration of just how the BAM Website Platform can support your organisation in communicating with your membership.
